

The SEAA/NISD “**Detailing Guide for the Enhancement of Erection Safety**” was developed by industry experts, for the steel erection industry! The growing trends towards “Design-Build and “Fast-Track” methods of today’s construction have made it more important than ever, that the alliance between members of the steel industry become even more concentrated. The intent of these “erector friendly” is to permit detailers and erectors together to better provide structures that are safer, timely and more erectable; promoting the use of structural steel as the material of choice.

Endorsed by the **Steel Erectors Association of America and [SEAA]**, and the **National Institute of Steel Detailing [NISD]**, the Detailing Guide is widely accepted and used by industry members as an invaluable tool for detailing firms, steel erectors, fabricators, and any other firms that employ people to prepare and review structural steel shop drawings. The manual features 50 ready-to-use pictorial drawings, with suggested concepts, hints and illustrations of erection aids which have been based on OSHA 2001 [29 CFR 1926.750 through 761] new steel erection standard and the combined experience of SEAA and NISD members. None of the information presented in this guide is meant to supersede project-specific contracts.

Part 1

Table of Contents
Preamble
The Team
Pre-Drafting
Checklist

Part 2 – OSHA Mandatory Sketches [29CFR – Subpart R 1926-750 thru 761]

Critical lifts	1926.751 [definitions]
Tripping hazards	1926.754 [c] [1] [I]
Fall through deck protection	1926.754 [e] [2] [i] [ii]
Column anchorage	1926.755 [a] [1] [2]
Minimum number of bolts	1926.756 [a] [1] [2]
Perimeter protection	1926.756 [e] [1] [2]
Column splices	1926.756 [d]
Double connections	1926.756 [c] [1] [2]
Bracing connection	1926.756 [2] [b]
Joist/Joist Girder stability	1926.757 [a] [1] [i] [ii] [iii]
Joist attachment	1926.757 [a] [8] [I] [ii] [b] [1] [2]
Fall protection	1926.760 [a] [1] [2]

Part 3 – Good Practice [Suggested] Sketches

Erector friendly column
Access clearances
Hand traps [lacerations hazards]
Punctures/snagging hazards
Self-support connections
Rollover protection
Deck supports
Out of position problems
Beam connections [options]
Bracings
Spandrel

Part 4 – Appendixes

Tools for the Trade

Suggested useful notes

Suggested useful details

Horizontal swing clearances [beam to beam]

Vertical swing clearances [between columns]

Horizontal swing clearance [beam to beam]
